

Chapter 01

The following attributes help define a project:

- Clear objective
- Various resources
- Specific time frame
- Unique, one-time endeavor
- Sponsor or customer
- Degree of uncertainty

Develop project charter

- Rationale
- Project objective
- Expected benefits
- General requirements and conditions

Chapter 02

Projects are identified in various ways:

- Organizations strategic planning
- Response to unexpected events
- Group organized to address a need

The steps in project selection are:

- Develop criteria
- List assumptions
- Gather data
- Evaluate each opportunity

Project charter serves a number of purposes:

- Provides sponsor approval
- Commits funding for the project
- Summarizes key conditions and parameters
- Establishes framework to develop baseline plan

Chapter 03

Some factors that a contractor might consider in making a bid/no-bid decision are:

- Competition— which other contractors might also submit a proposal?
- Risk— is there a risk that the project will be unsuccessful (either technically or financially)?

- Mission—is the proposed project consistent with the contractor’s business mission?
- Reputation—what is the contractor’s reputation with the customer?
- Customer funds—does the customer really have funds available to go forward with the project?

Technical Section

- The objective of this section is to convince the customer that the contractor understands the problem or need and can provide the least risky and most beneficial solution.

Management Section

- The objective of the management section is to convince the customer that the contractor can do the proposed work and achieve the intended results.

Cost Section

- The objective of the cost section of the contractor proposal is to convince the customer that the contractor’s costs for the proposed project are realistic and reasonable.

Complex vs Simplified Project Proposal

Large number of pages	Assumptions
Defined sections	Project scope
Charts and figures	Price
	Risks

Contract Terms and Conditions

- Misrepresentation of costs
- Approval of subcontractor
- Termination
- Terms of payments
- Bonus/penalty payments
- Changes

Chapter 4

A project quality plan includes or references:

- Project specifications and standards
- Industry or government standards (for design, testing, safety, construction, etc.)
- Codes that must be used and met during the performance of the project work

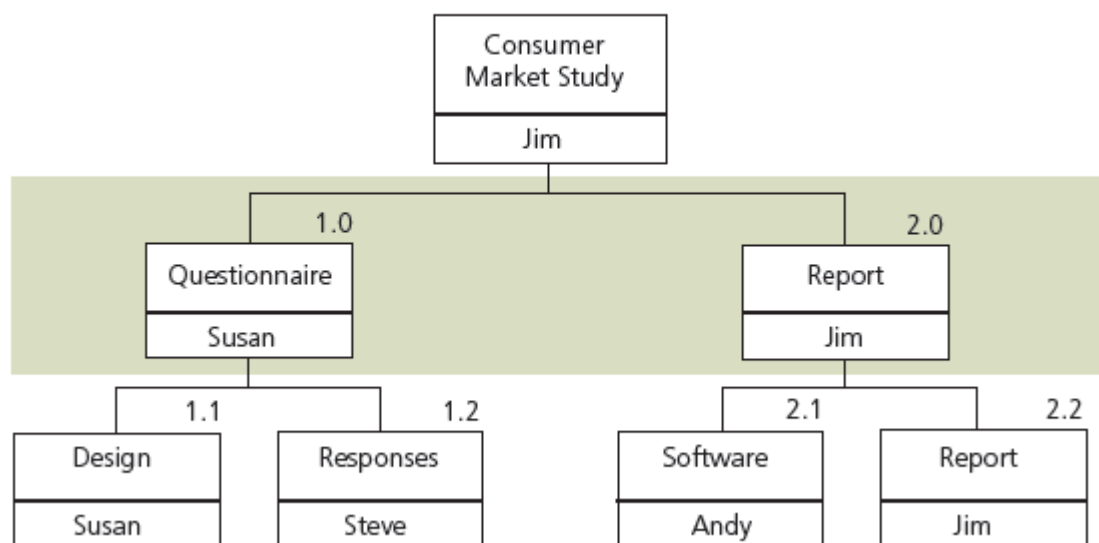

- Written procedures for using various quality tools and techniques

The key to quality control is to:

- Monitor the quality of the work early and regularly throughout the performance of the project
- Compare results with quality standards
- Make any necessary corrective actions immediately, rather than waiting until all the work is completed before checking or inspecting for quality
